

Пишем wat-модуль

```
1 (module
2   (export "the_answer" (func $the_answer))
3   (func $the_answer (result i32)
4     i32.const 42
5   )
6 )
```

Используем wat-модуль

```
1 const fs = require('fs');
2 const buf = fs.readFileSync('./answer.wasm');
3
4 WebAssembly.instantiate(new Uint8Array(buf)).then(({ instance }) => {
5   console.log(instance.exports.the_answer());
6 });
```
