Используем wat-модуль

```
1 const fs = require('fs');
2 const buf = fs.readFileSync('./answer.wasm');
3
4 WebAssembly.instantiate(new Uint8Array(buf)).then(({ instance }) => {
5   console.log(instance.exports.the_answer());
6 });
```

Импортируем функцию из JS

```
 1 (module
 2   (import "imports" "consoleLog" (func $log (param i32)))
 3   (export "is_even" (func $is_even))
 4   (func $is_even (param $num i32) (result i32)
 5     get_local $num
 6     call $log
 7     (i32.eqz
 8       (i32.and
 9         (get_local $num)
10         (i32.const 1)
11       )
12     )
13   )
14 )
```
